

RUNWAY BROWS

Brow After Care

HOW TO WASH

1. Wash hands with anti-bacterial soap (dial)
2. Gently pat brows with wet hands
3. Apply small drop of soap (brown vial) to both to fingertips
4. Using circular motions, gently rub entire brow from tail to head and back
5. Wet hands with lukewarm water and wipe brows until all soap is removed
6. Pat dry with paper towel and **completely** air dry for 2-5 minutes
7. **Lightly** apply small amount of ointment with Q-tip. Less is more!

DAY ONE

- Wash brows 15-30 minutes after procedure
- Wash every 1.5 hours (Microblading) or 2 hours (Ombé Brows)
- *Oily skin* - Only apply ointment after the **last** wash, directly before bed.

DAY TWO – TEN

- Wash brows morning and night
- Apply aftercare ointment after each rinse, unless otherwise instructed.
- *Oily skin* - If brows become shiny throughout the day from oil production, lightly pat/wipe with damp cotton round and then pat dry.

SUPER IMPORTANT!

- No makeup on or around the brow area (foundation/eye shadow for 5 days. Brow products 10 days)
- Sleep on back (5 days)
- No working out or saunas (5 days-7)
- Keep showers short (5-7 days)
- Wash face in sink, not shower! (10 days)
- Avoid runoff when washing hair (10 days)
- Avoid direct sunlight (14 days)

THE HEALING PROCESS

Microblading is a process so please be patient and trust the process!

- Eyebrows will initially appear very dark for the first 5 days
- They will appear very patchy as the brows flake.
- Eyebrows will go through a milky phase where they appear to be very light or disappearing.
- They will eventually darken to the permanent color.

IS THIS NORMAL?

All of the following is very normal during the healing process!
Please do not be concerned if you experience any of the following:

- Extremely dark color on the first few days
- Scabs (Do not pick! Let them naturally fall off)
- Patchiness
- Flakiness
- Itchiness (Avoid scratching!)
- Loss of pigment (Any pigment that is lost will be fixed during the touchup appointment)

EXTRA INFORMATION

- Retin A, Renova, Alpha Hydroxy and Glycolic Acids must never be used of treated area. They can cause premature exfoliations of the pigment and may alter pigment color.
- All cosmetic tattoos will fade over time. Additional Touch-Ups will be needed between 6 months and 2 years.
